

# Setting a Canvas quiz to use Respondus LockDown Browser (RLDB)

1. In Canvas, make sure the quiz has been deployed in the Canvas course.  
(Click **Quizzes** from the left side Course Navigation menu to view a list of course quizzes)
2. Click **LockDown Browser** from the left side, Course Navigation menu. Verify information is correct and Click **[Log in]** button.

-A list of quizzes in the course will be displayed  
 -'Not Required' in the right column indicate LDB is not required for the test

3. To change the settings, click the box to the left of the quiz name and select **[Modify Settings]**.

-Options will appear.

4. To require Lockdown Browser, Click the option **'Require Respondus LockDown Browser for this exam'**  
 Select additional desired options.

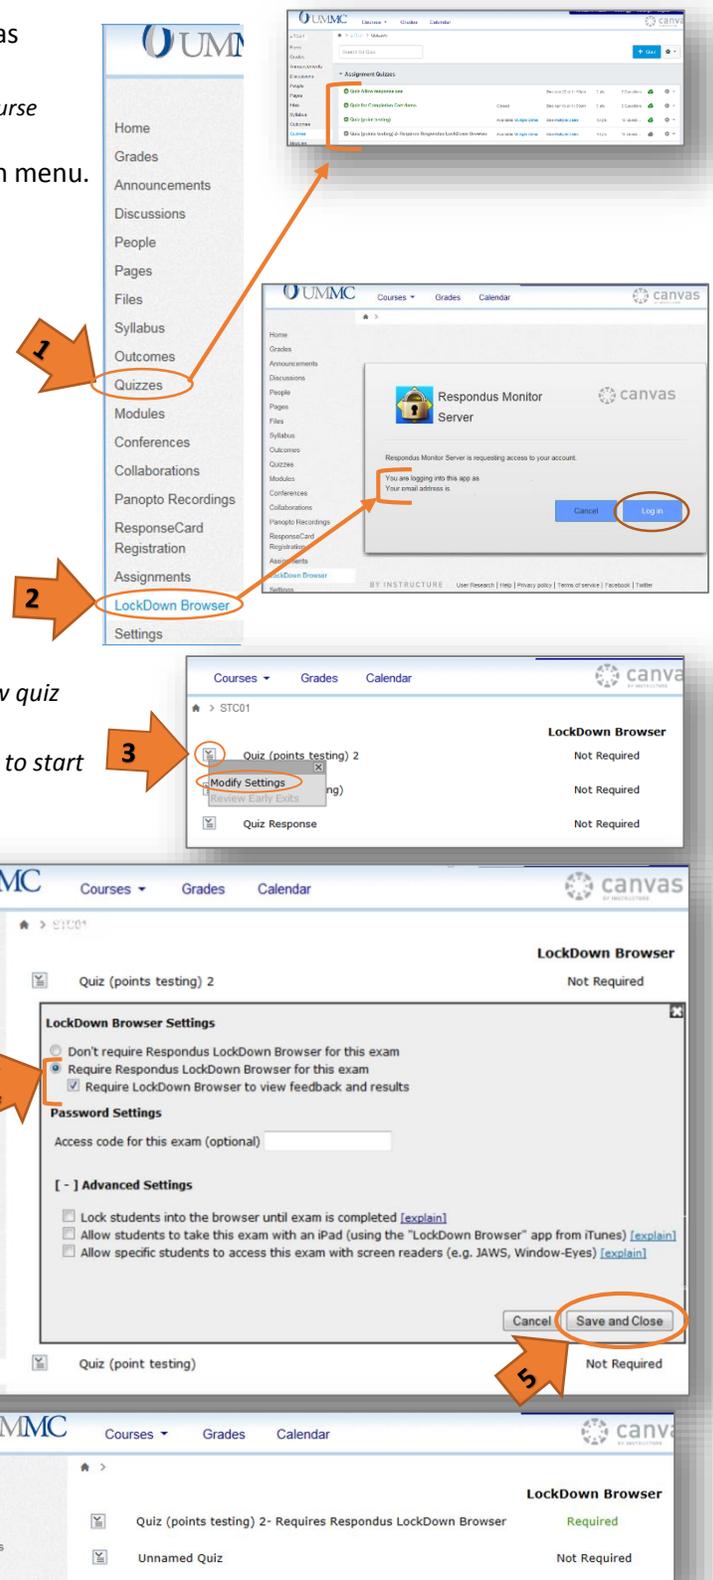

-You may additionally require the Lockdown Browser be used to view quiz feedback and results.  
 -Optionally you may create an access code that students must enter to start the quiz. Lockdown Browser will prompt students to enter the instructor-provided code before proceeding with the quiz.

Advance Settings are available

>The first setting will prevent students from exiting the browser until the exam is completed. This is sometimes used in testing centers where a proctor can enter a password to exit an exam early.  
 > The second setting will allow students to take the exam with an iPad, using the free LockDown Browser app.  
 > The third setting will allow specific students to access the exam with screen reader accessibility programs. For additional information, select the [explain] link that follows each setting.

5. Click **[Save and Close]**.

-The quiz will update in the list to show that the LDB has been set as required for the quiz.

## Students will need to be instructed to use the RLDB.

Information and installation for the LockDown Browser is provided at the link below and available in designated Student Computer Labs.
