

eLearning: November 6, 2020 – May 5, 2021

Course Description:

Electronically mediated learning. With Covid-19 our world has been turned upside down. We continue to fear what we don't know. But we can and need to continue to provide care for our patients and staff. Practical infection control in dentistry is a multi-faceted process. Protocols should be updated to include good: identification of high-risk patient populations, barrier technique, aseptic technique, surface disinfection, instrument sterilization, and equipment disinfection and sterilization. Additionally, we need to understand the proper use of antibiotics in dentistry.

Topics:

- OSHA, Work Place Sterility & Infection Control
- Management of Infections for Dental Patients

Objectives:

- Explain the changes that COVID -19 had on our lives.
- Describe the recommendations for prophylactic antibiotics for cardiac and orthopedic patients.
- Diagnose and manage simple odontogenic infections.
- Determine when to refer a patient with odontogenic infection.
- Discuss the different antibiotics available and their indications and contraindications

Speaker

Glenn Maron, DDS

Dr. Glenn Maron received his DDS from Emory University school of Dentistry in 1986, followed by five years of oral and maxillofacial surgery training at Emory University and affiliated hospitals, completing his residency in 1991. The following year he completed a reconstructive surgery fellowship at Emory. He is currently the chief of the Oral and Maxillofacial Surgery section of Children's Healthcare Atlanta, Scottish Rite. Dr. Maron is also a diplomate of the American Board of Oral & Maxillofacial Surgery and is a clinical assistant professor for the Department of Surgery, Oral and Maxillofacial Surgery section at Emory University, Grady Memorial Hospital and Emory University Hospital Midtown.
